

MANUFACTURING  
TECHNOLOGIES

# *Production Systems*

---

*Production Control*  
*System Management*  
*Industrial Logistics*  
*Quality Assurance*

---

The emergence of manufacturing as a major industry in northern Nevada is creating numerous career opportunities for *trained* production managers and technicians. TMCC's new Production Systems emphasis in Manufacturing Technologies prepares you to advance in these high-skill, high-wage supervisory positions.

A generous donation by **International Game Technology, Inc.**, is helping TMCC build a modern facility with advanced computer controlled manufacturing capabilities. The lab allows us to train students for employment opportunities at a variety of businesses, including high tech fabrication companies, assembly and production plants, machine repair and maintenance shops, and specialty metalworking and plastics facilities.

## **On Demand Training**

Our flexible open-entry, self-paced courses respond to the needs of industry and working professionals. Students receive personal attention and numerous opportunities for hands-on training with highly-qualified instructors and experienced lab attendants who are available throughout the class day.
